SUDHANSHU PATIL

AI ENGINEER

7248913660 | sudhanshupatil588@gmail.com | Nagpur, Maharashtra, India
LinkedIn | GitHub | Portfolio | LeetCode Knight (Top 5%) | Immediate Joiner

SUMMARY

AI Engineer with 1+ year of experience owning production AI systems from design through deployment as sole AI engineer for banking and enterprise clients. Built agentic RAG with HITL, an MCP tool server across 9 CRM modules, a 94% PII-redaction latency cut, and solo platform migrations for air-gapped systems. Backed by full-stack delivery (FastAPI, React, PostgreSQL, Redis), 8,000+ lines of production code, and shipped products with real users.

WORK EXPERIENCE

AI Engineer (Freelance / Contract) | Independent | Jul 2026 – Present

MCP integrations, agentic workflow automation, and AI systems consulting for early-stage startups

- Architected and shipped production MCP servers enabling AI-native tool use across CRM and analytics modules for startup clients.
- Designed agentic RAG pipelines with hybrid retrieval, evaluation frameworks, and guardrails — delivered end-to-end from architecture through deployment.
- Provided AI consulting on LLM integration, system architecture, and cloud deployment for clients across BFSI and enterprise verticals.

AI Solutions Developer | SimpleWorks | Aug 2025 – Jun 2026

Sole AI engineer owning architecture, development, and production deployment for banking and enterprise clients

- Delivered QA-passed agentic reasoning for BFSI clients including Bank of India, as measured by multi-traversal responses with up to 2 HITL levels, by building an Agentic RAG framework (Orchestrator, Intent Recogniser, Dynamic Query Splitting, Math Sandbox) on a Hub-and-Spoke architecture.
- Enabled agentic tool-use across Claude, Gemini CLI, and internal apps, as measured by 10+ production MCP tools across 9 CRM modules with configurable 40k-token memory, by architecting a cloud-hosted FastMCP server as a native query mode.
- Cut PII redaction latency by 94% from 8 seconds to 0.5 seconds by replacing a spaCy transformer with a fine-tuned NER DistilBERT and adding triple-verification guardrails that block excluded fields from every LLM payload.
- Unblocked GPT-5-series adoption, as measured by zero-rollback upgrades on QA and PSB Production, by solo-leading Python 3.11 to 3.13 and LlamaIndex migrations on Azure AI Foundry, including offline wheel packaging for air-gapped banking systems.
- Sustained production reliability as a team of one, as measured by 8,000+ lines of production code, 5+ major SQL fixes, and 20+ QA defects resolved, by owning architecture through development and deployment.

Associate Data Scientist (Intern) | Novartis | Jan 2025 – Jul 2025

Awarded full-time Pre-Placement Offer (PPO) for performance — declined to join SimpleWorks

- Kept sensitive clinical data fully on-prem, as measured by R-code responses of OSS-comparable quality with zero data egress, by building an on-prem LLM chatbot trained on internal R-coding documentation.
- Eliminated manual intervention for 60+ Data Managers by shipping VBA and Office Scripts automations with auto-filing and input guardrails, and replacing SAS reporting with an interactive RShiny dashboard.

PROJECTS

MediClaim — Agentic RAG for Insurance Claims

- Engineered an end-to-end LLMOps pipeline — LangGraph orchestration, hybrid dense+BM25+GraphRAG retrieval, cross-encoder reranking, DeBERTa-NLI grounding, RAGAS evaluation, and full Langfuse tracing — passing load tests and red-teaming at zero infra cost.

ATS-Ready — AI Resume Tailoring Platform

- Delivered a revenue-ready AI platform solo, as measured by JWT auth, Razorpay billing, and 37 tests in 3-stage CI, by owning backend, frontend, LLM pipeline, and DevOps.

Telecom Request Processing Workflow

- Turned manual triage into a governed AI workflow, as measured by full audit logging, SLA flags, and a live dashboard, by shipping a config-driven LangGraph pipeline with zero per-type conditionals in branch executors.

SKILLS

AI / ML: LLMs | RAG | Agentic AI | NLP (NER) | Fine-tuning (QLoRA/PEFT) | PyTorch | Evaluation (RAGAS) | Guardrails | MCP
Languages and Backend: Python | C++ | SQL | FastAPI | REST APIs | Async (ARQ) | Pydantic | React (working)
Data and Databases: PostgreSQL | MySQL | Redis | SQLite | Qdrant | ChromaDB | Neo4j
DevOps and Cloud: Docker | Kubernetes (LFS158) | CI/CD (GitHub Actions) | Git | Linux | Nginx | AWS Bedrock | GCP | Azure AI Foundry | Langfuse

EDUCATION AND HONORS

BITS Pilani, Hyderabad Campus | Bachelor of Engineering in Electronics and Communication Engineering | Minor in Computing and Intelligence | Oct 2021 – Jul 2025
Honors: INSPIRE-SHE Scholar (Top 1%, MH HSC — 97.5%) · Naukri EROH University 2nd Runner-up · LeetCode Knight (Top 5%)

CERTIFICATIONS

Kubernetes LFS158 (Linux Foundation, 2026) | Docker Foundations Professional (2026) | Databricks Fundamentals (2026) | Oracle Agentic AI Certified Professional (2026) | Oracle Gen AI Certified Professional (2024) | Multi AI Agent Systems with CrewAI | Mastering AutoGen
